

Measuring Length Overall

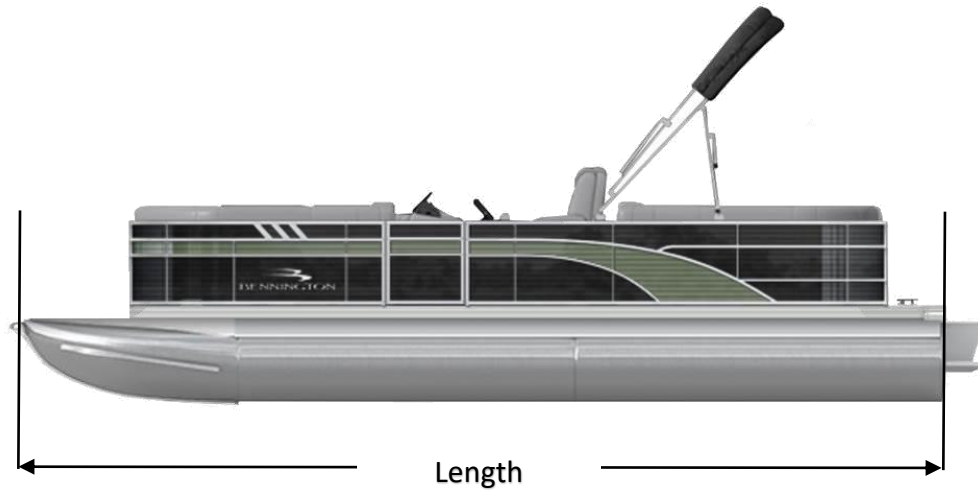

A vessel's length overall dictates the equipment the vessel must have to comply with federal and state laws. Length overall is measured from the tip of the bow in a straight line to the stern of the vessel. Bowsprits; rudders; outboard motors and motor brackets; handles; and other fittings, attachments, and extensions are not included in the measurement.

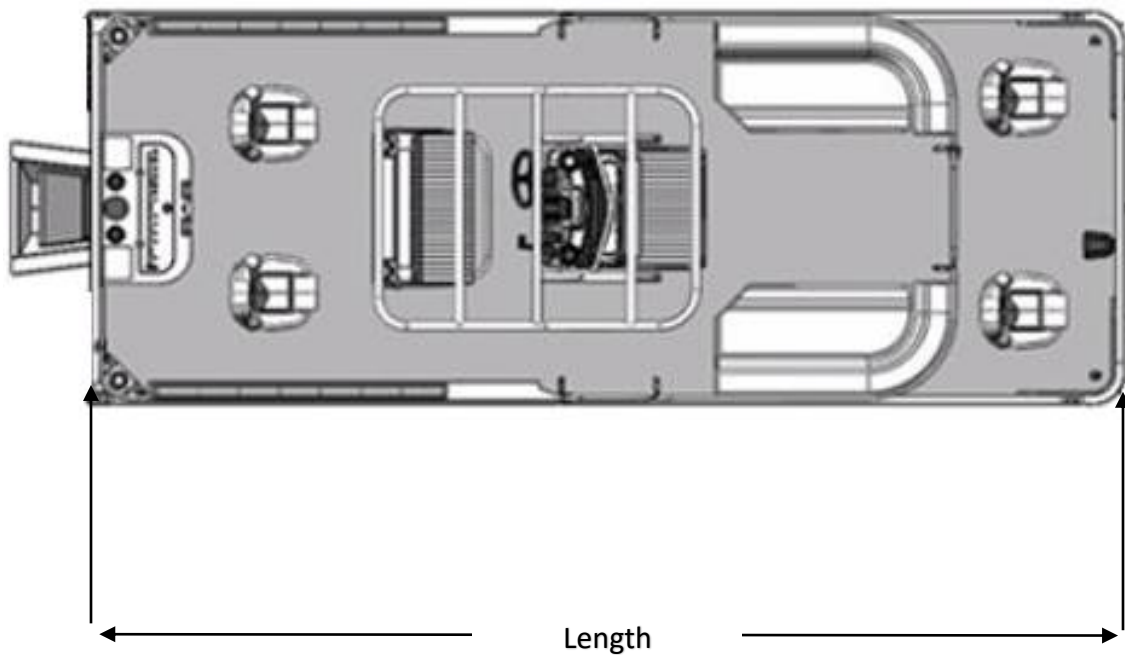

Swim platforms or accessories cannot be added to a boat that will result in the boat being more than 24'.6" in length.

Pontoon Boats

Pontoon to Pontoon: Pontoons Longer than Deck:

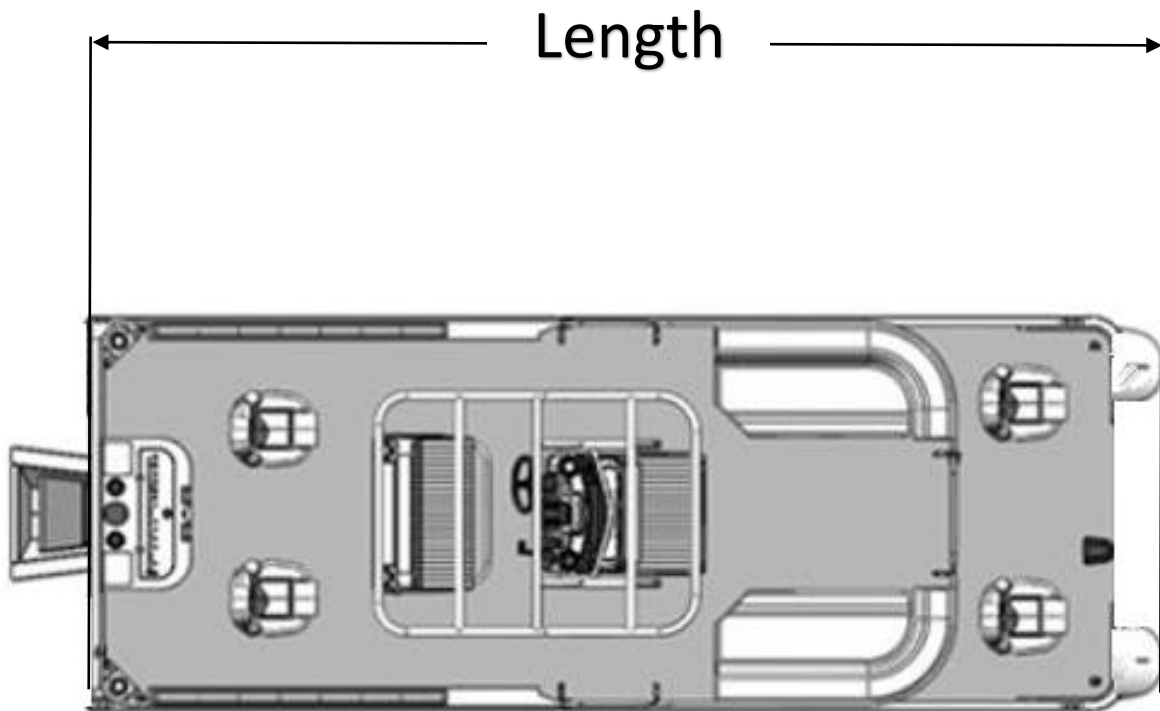

Deck Longer than Pontoons:

Swim platforms or accessories cannot be added to a boat that will result in the boat being more than 24'.6" in length.

Deck to Pontoons:

LOA IS THE TOTAL LENGTH OF BOAT – example given on all three diagrams

Swim platforms or accessories cannot be added to a boat that will result in the boat being more than 24'.6" in length.
